# Installing MDOpen Web

Version 8.6

Published March 4, 2025

Overview & Architecture

MDOpen Web is a browser-based installation of MDOpen for VSCODE.

It is installed and runs natively as a web application from an IBM i HTTP server instance.

MDOpenweb uses the same MDCMS REST APi's as MDOpen-RDi and MDOpen-VSCODE-Desktop, to retrieve the content.

Pre-Requisites

1. MDCMS Rest API Server installed and configured with SSL/TLS/HTTPS access.

2. Available TCP port numbers for MDOpenweb HTTP server instance. Consult with your Operations/Infrastructure Administrator

3. IBM i Digital Certificate Manager server application name

4. MDCMS Instance Suffix

5. V7R2M0 IBM i OS or later

6. *SECADM Authority

> ⚠️ **SSL/HTTPS Mandatory**
>
> Communication to the MDOpenweb HTTP server and to the MDChange REST API servers **MUST** be using HTTPS scheme

Installation Logs

The installation log is found in one of two places:

```
/mdcms/temp/<server_instance_name>_installation_audit_<date>_<time>.log
```

or

```
/www/<server_instance_name>/logs/<server_instance_name>_installation_audit_<date>_<time>.log
```

> ℹ️ **Info**
>
> Prefix the paths above with `/<IASP name>` as applicable
