

Connection properties

MDOpen for VS Code Connection Properties

Property	Description
Nickname	a name to help you identify this repository connection when multiple connections are present
Host	the IBM i host name or IP address that is used to connect to that system. Don't include the http(s):// or the port number in this field.
MDCMS Rest API Port	the port number that the MDCMS REST API server is listening on, or the port number that a proxy server that forwards http traffic is listening on. If left blank, 80 will be used for unsecured traffic and 443 for secured traffic
Use HTTPs	click if SSL certificates are in place for the MDCMS REST server connection
Ignore Certificate Errors	click if the connection may be established even if the certificate isn't trusted, is expired or doesn't match the address
SSH Port	the port number that the OpenSSH server on the IBM i partition is listening on. This is typically 22.
Username (required)	a valid user profile on the IBM i
Password (required)	the password for the profile
Environment	the instance of MDCMS on the partition to connect to. Leave blank if for the default instance which is the libraries MDCMS, MDREP, MDSEC and MDXREF. If there is a suffix for the library names for the instance, the suffix should be entered here as the environment value.

Property	Description
ASP Group	The name of an ASP (auxilliary storage) Device that should be added to the namespace at startup. Leave blank if only using system storage for the connection
